

## HOLYBAG

### Use

Mobile filtration system used to collect localized oil leaks (for example: below a transformer, pipe connection, etc...) during maintenance operation or waiting for fixing...

It allows separating, settling and collection of oil as well as filtration of the decanted water.

### Conception

Stainless steel structure composed by 3 compartments:

- Separator equipped with coalescing plates allowing quicker settling and a sludge with a 1,5" draining valve.
- 37 liters oil storage, connected to an oil level indicator, equipped with a 1,5" draining valve
- Decanted water retention compartment equipped with a safety siphon, a 2" draining valve and a FILTRELEC ECODESIGN 15M2 filter assembled on a polypropylen quick release coupler.

Removable cover equipped with trash rack

Ergonomic handles.

|                | Oil retention oil volume | Outer dimensions (with valves) |        | Weight (without filter) | Max allowable flowrate |
|----------------|--------------------------|--------------------------------|--------|-------------------------|------------------------|
|                |                          | Dia                            | H      |                         |                        |
| <b>HOLYBAG</b> | 37 l                     | 940 mm                         | 651 mm | 25,7 kg                 | 10 l/min               |

### Installation

Positioning straight on the ground allows the product to be placed easily below the critical leak.

Circular bubble level to guarantee correct level and operation

Possibility of ground fixing.

Delivered with user manual stucked on the HOLYBAG's body.

### Photos

**Delivery time : 2 weeks after PO reception, except during holidays periods**
